The Building (Product Certification) Regulations 2009 require evidence established by -
(A) testing the building method or product; and
(B) assessing a quality plan prepared by the proprietor of the building method or product in respect of the building method or product.
The product certification body must also conduct site audits of the factory or, as the case may be, the construction site where the building method or product is applied or produced.

How we validated compliance:

1. **The scope of use and limitations of the method was reviewed by an expert with account taken of the effect of passenger liners berthing at the wharf.**
2. **The method of remediation was subject to review including a "buildability assessment" using the specified components based on the specified design and specification;**
3. **The performance of the systems and or components that are used in the method of remediation were verified by way of testing and review of supplied test and in-service history data meeting the requirements of the certification body**
4. **The technical and installation information was assessed against the certification body's documented technical literature requirements**
5. **The product quality plan of the certificate-holder was also assessed by way of a review against the requirements of the certification body.**
